Register issued on : 2018-06-01

Subsector A11: SAFETY AND SECURITY

Subsector : A11 **Registration Date :** 2018-05-30
Organization : UNI
Country : Italy
Project ID : 01604538/0001 **Project**
Established
ICS : 03.080.30
National Ref : UNI1604538
Title : Society and citizenship' safety - Unattended beaches - Beach safety
Scope : The standard aims to provide public and private bodies with the methodology to assess and qualify free-access bathing areas (marine, lake and river) to allow citizens their usability in terms of security and information.
 The standard can also be applied to the bathing areas with accommodation facilities such as bathing establishments.

ICS :
National Ref : STN 92 0205/Z1
Title : Fire behaviour of construction products and building constructions. Circuit integrity maintenance of cable systems. Requirements, testing, classification and application of test results. Amendment 1
Scope : The standard specifies the test methods and requirements for achieving the functional resistance of cable systems under fire conditions to ensure a sustained supply of electricity according to the applicable law. The test methods may only be used for cable products up to 1 kV or for optical cable products. The standard specifies the classification of the functional resistance of the cable systems in case of fire based on test results, without testing, and indicates the possibility of direct and extended application of test results.

Title : Energy performance of buildings - Method for calculation of system energy requirements and system efficiencies – Electrical energy storage, Module M13.1
Scope : The purpose of this technical specification is to provide a calculation method for modeling the behavior of an on site electrical energy storage system in the calculation of the energy performance of buildings. In this technical specification, a calculation method is provided on a monthly basis as well as on an hourly basis (dynamic method).
The present technical specification has as input data the producibility of an electrical energy

production plant and the overall electrical requirements of the building, as well as the characteristic performance data of the storage. It has as calculation results the electricity produced and immediately used to cover the needs of the building, the accumulated electrical energy, the energy accumulated and then used to cover the needs of the building, the electricity which must be imported to cover the building needs and the electricity exported.

This technical specification applies to all types of storage systems (acid lead, lithium ion, etc.).

The present technical specification applies only to one-way accumulation systems, able to accumulate only the energy coming from in-situ production plants and not the one coming from an electrical network outside the building.

This technical specification does not apply to the UPS.

Title : Premises intended for the positioning of steam boilers and/or super-heated water generators and ancillary equipment
Scope : The technical report provides information on the characteristics of the premises where steam boilers and/or super-heated water generators, including any ancillary equipment, are located, considering the risk deriving from pressure operation.

It shall apply to enclosed and, where relevant, open spaces where generators are located.
 The technical report does not cover the premises in which they are located:

- generators with a maximum allowable pressure (PS) not exceeding 0,5 bar;
- generators whose total volume does not exceed 25 litres and whose maximum allowable pressure does not exceed 32 bar;
- steam boilers and/or super-heated water generators for which the product of allowable pressure and the total volume does not exceed 300 bar x L and the pressure does not exceed 10 bar;
- generators with a volume less than or equal to 5 litres regardless of the PS value, and in any case generators with a rated capacity not exceeding 35 kW, provided that they are installed individually and not in batteries.

Title : Cork stoppers. Agglomerated cork stoppers with or without natural discs for sparkling, semi-sparkling wines and gasified drinks. Determination of moment of take-off and extraction strength

Scope : This draft standard specifies a test method, for determining the maximum take-off / torque and the maximum extraction force, required for the extraction of Agglomerated cork stoppers with or without natural cork discs for sparkling, semi-sparkling wines and gasified drinks.

It applies to agglomerated cork stoppers with or without natural cork disks for sparkling, semi-sparkling wines and gasified drinks, ready-to-use and partially inserted into the bottleneck
